

Supabase Guide

1. What is Supabase?

Supabase is the tool we use to store and manage data from our onboarding form. Think of it like a smart spreadsheet in the cloud. Every time someone fills in the form, their info lands here automatically.

- You can view, search, filter, and export that data all from one place.
- You don't need any coding knowledge to use it (the dashboard is completely visual).
- Uses RLS policies (security measures) to ensure no one unauthorised can access the data

One thing to remember long term:

Supabase free plan pauses projects that haven't had any activity for 7 days. So if nobody submits the form for a week, it might pause. If that happens just log into Supabase and click **"Restore project"** to continue storing data, takes 2 minutes and nothing that was previously stored is lost.

If we want we can avoid this by upgrading to a paid plan later when the business is using the form regularly, it's about \$25/month.

2. Creating Your Account

You've been added to the project already. All you need to do is accept the invitation:

1. Check your inbox for an email from **noreply@supabase.io**
2. Click **"Accept invitation"** in that email
3. Create an account using your **work email address**
4. Verify your email: Supabase will send you a confirmation link
5. Done! You'll land directly in the project

To sign in on future visits: go to supabase.com → Sign In → enter your email and password.

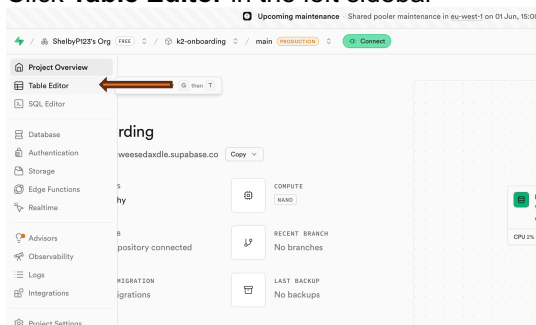

3. Finding the Onboarding Data

Once you're in the project, here's how to get to the data:

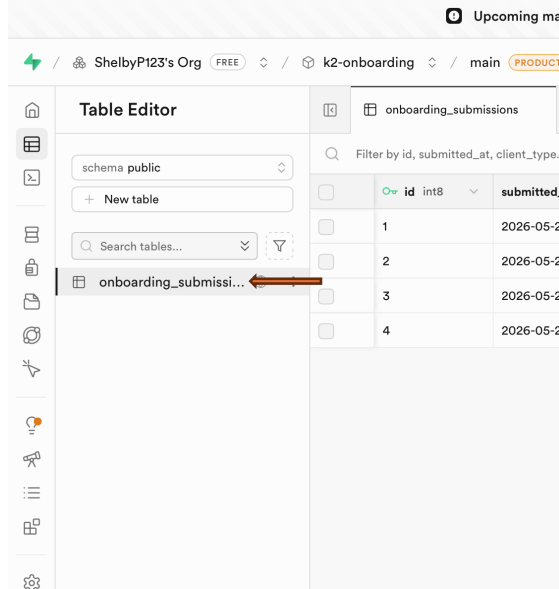

1. Go to projects → open k2-onboarding

2. Click **Table Editor** in the left sidebar

3. You'll see a list of tables → click on **onboarding_submissions**

4. All form submissions will load as rows, with each field as a column

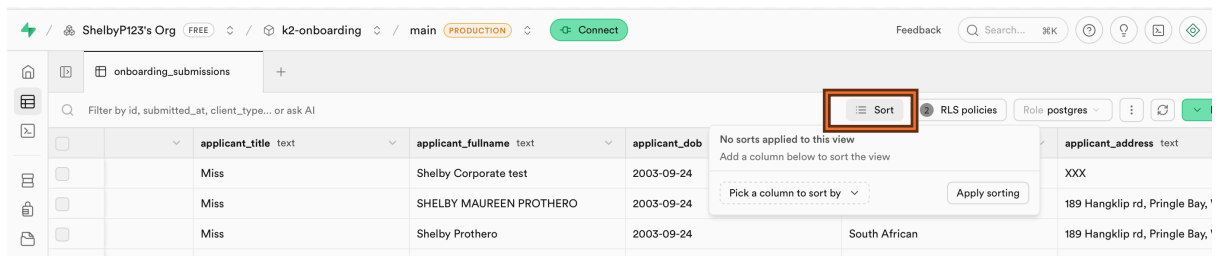

The screenshot shows the 'Table Editor' interface with the 'onboarding_submissions' table. The table has columns: 'id' (int8), 'submitted_at' (timestamp), 'client_type' (text), 'applicant_title' (text), 'applicant_fullname' (text), and 'applicant_dob' (text). The data rows show four submissions.

	id	submitted_at	client_type	applicant_title	applicant_fullname	applicant_dob
	1	2026-05-28 10:11:47.132+00	private	Miss	SHELBY MAUREEN PROTHERO	2003-09-24
	2	2026-05-28 10:35:23.546+00	private	Miss	Shelby Prothero	2003-09-24
	3	2026-05-28 11:00:43.435+00	corporate	Miss	Shelby Corporate test	2003-09-24
	4	2026-05-28 13:29:04.681+00	private	Miss	Shelby Prothero	2003-09-24

4. Sorting the data

Using the sort button (no coding needed)

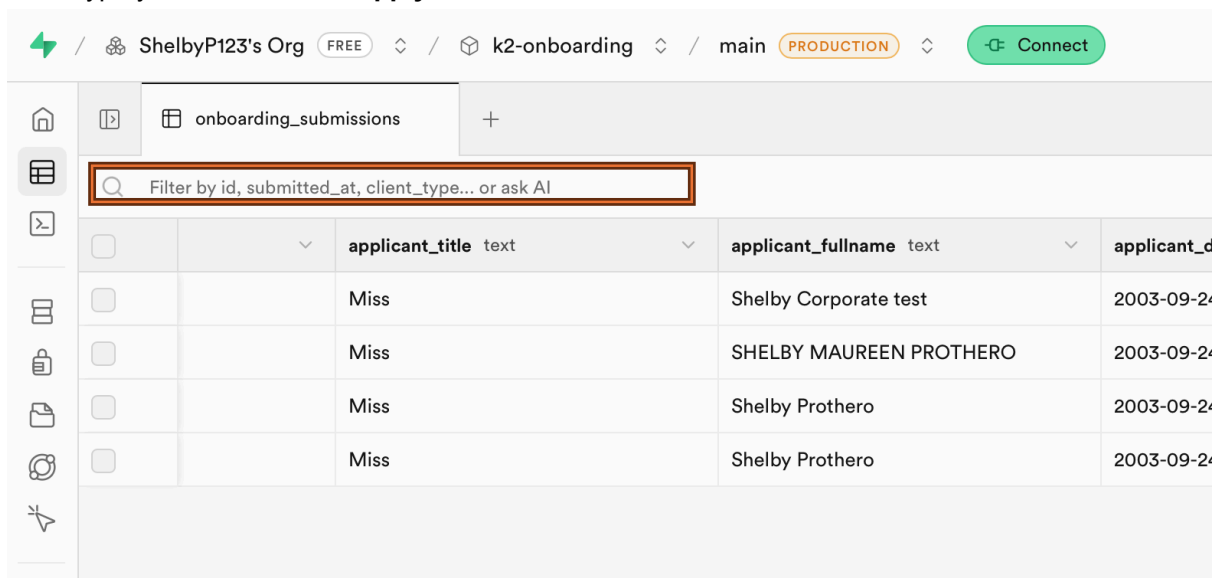

1. In the Table Editor, click **sort** → **pick column to sort by**
2. Pick a column (e.g. **submitted_at**)
3. Click **Apply sorting**
4. Click anywhere on the screen (do not click x on top of box as that deletes the sorting rules)

5. Finding Specific Rows

Using the Filter button (no coding needed)

1. In the Table Editor, click **Filter** → **Add filter**
2. Pick a column (e.g. **email**)
3. Choose a condition (e.g. **equals** or **contains**)
4. Type your value and hit **Apply**

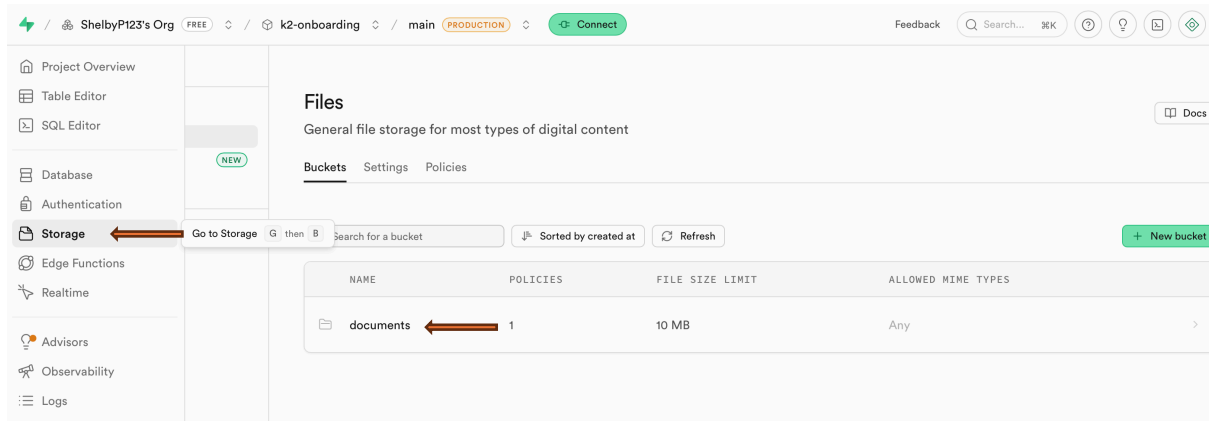

6. Accessing Uploaded Files

Any files uploaded through the onboarding form are stored in Supabase's **Storage** section (not the database).

Here's how to find them:

1. Click **Storage** in the left sidebar
2. You'll see a list of **buckets**, these are basically folders. Look for the one named documents
3. Click into the bucket to browse the files
4. Click any file to **preview** it or use the **Download** button to save it to your computer

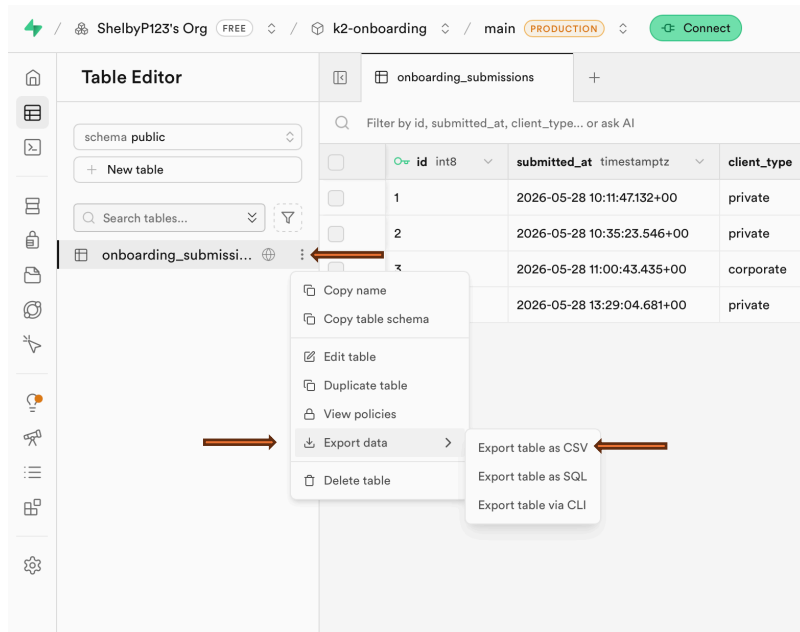

A few things to know:

Files are usually organised by submission, look for folder names that match a user's ID or email, otherwise the corresponding label at the end of the submission row (found in the table editor tab).

7. Exporting Data

Export the full table

1. Open the table in **Table Editor**
2. Click the **3 dots** next to `onboarding_submissions`
3. Click **Export data** → **Export table as CSV**

4. The file downloads to your computer, open it in Excel or Google Sheets

Export the full table

1. **Select the rows** you want to export
2. Click **Export data** → **Export table as CSV**
